Velour towels made of 100% cotton fabric, printed (in a limited range of 5 dyes/stuffs) and finished, including accessories (sewing thread, printed and woven labels) (based on material partly pre-certified according to Oeko-Tex® Standard 100)

The results of the regression model according to Table 10¹ demonstrate the positive impact of the variables used (linear coefficient is still high) which shows that the growth rate of the gross value added from the non-manufacturing departments of the business sector is high.

The statistical analysis based on the decomposition of the time series of the gross value added of the non-manufacturing departments of the business sector (Table 11) shows that the growth rate of the gross value added of the non-manufacturing departments of the business sector is high.

The value of the coefficients also has negative a decreasing trend in the gross value added of the non-manufacturing departments of the business sector (Table 12) which is a sign of the fact that the growth rate of the gross value added of the non-manufacturing departments of the business sector is high.
