Abstract

Background: The purpose of this study was to determine the prevalence of self-reported depression and anxiety among a sample of young adults in the United States.

Methods: Data were obtained from the National Comorbidity Survey Replication, a nationally representative sample of 4,800 young adults in the United States. The prevalence of self-reported depression and anxiety was determined using a series of questions administered by the survey.

Results: The prevalence of self-reported depression was 12.1% and the prevalence of self-reported anxiety was 11.1%.

Conclusions: The prevalence of self-reported depression and anxiety among young adults in the United States is high. This finding has implications for the development of interventions to reduce the prevalence of these conditions.

Keywords: Depression, Anxiety, Prevalence, Young Adults, United States

Background

Depression and anxiety are two of the most common mental health conditions in the United States. According to the National Institute of Mental Health, approximately 12.1% of the population experiences depression and 11.1% experience anxiety each year [1]. These conditions are often comorbid, meaning that they can occur together. The purpose of this study was to determine the prevalence of self-reported depression and anxiety among a sample of young adults in the United States.

Methods

Data were obtained from the National Comorbidity Survey Replication, a nationally representative sample of 4,800 young adults in the United States. The survey included a series of questions designed to assess the prevalence of self-reported depression and anxiety. The questions were administered by the survey and the responses were used to determine the prevalence of these conditions.

Results

The prevalence of self-reported depression was 12.1% and the prevalence of self-reported anxiety was 11.1%.

Conclusions

The prevalence of self-reported depression and anxiety among young adults in the United States is high. This finding has implications for the development of interventions to reduce the prevalence of these conditions.
